Electromagnetic flowmeter  
Full-bore flow sensors

F, V, W series  
electromagnetic  
flow sensors

### Introduction

ABB's full-bore FEF, FEV and FEW electromagnetic flowmeter sensors are available with either an AquaMaster 3 or a WaterMaster transmitter.

AquaMaster 3 and WaterMaster are a range of high performance electromagnetic flowmeters for the measurement of electrically conductive fluids and are supplied as factory-configured and calibrated systems.

This User Guide provides end-user details for installation and connection.

The perfect fit for all water industry applications

**Measurement made easy**

# 1 Safety

Information in this manual is intended only to assist our customers in the efficient operation of our equipment. Use of this manual for any other purpose is specifically prohibited and its contents are not to be reproduced in full or part without prior approval of the Technical Publications Department.

## 1.1 Electrical Safety

This equipment complies with the requirements of CEI/IEC 61010-1:2001-2 'Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use' and complies with NIST and OSHA.

If the equipment is used in a manner NOT specified by the Company, the protection provided by the equipment may be impaired.

## 1.2 Symbols

One or more of the following symbols may appear on the equipment labelling:

	Warning – Refer to the manual for instructions		Direct current supply only
	Caution – Risk of electric shock		Alternating current supply only
	Protective earth (ground) terminal		Both direct and alternating current supply
	Earth (ground) terminal		The equipment is protected through double insulation

## 1.3 Product Disposal

**Note.** The following only applies to European customers.

	<p>ABB is committed to ensuring that the risk of any environmental damage or pollution caused by any of its products is minimized as far as possible. The European Waste Electrical and Electronic Equipment (WEEE) Directive (2002/96/EC) that came into force on August 13 2005 aims to reduce the waste arising from electrical and electronic equipment; and improve the environmental performance of all those involved in the life cycle of electrical and electronic equipment.</p> <p>In conformity with European local and national regulations (EU Directive 2002/96/EC stated above), electrical equipment marked with the above symbol may not be disposed of in European public disposal systems after 12 August 2005.</p>

## 1.4 Health & Safety

### Health and Safety

To ensure that our products are safe and without risk to health, the following points must be noted:

- The safety requirements of this equipment, any associated equipment and the local environment must be taken into consideration during installation.
- Install and use this equipment and any associated equipment in accordance with the relevant national and local standards.
- The relevant sections of these instructions must be read carefully before proceeding.
- Warning labels on containers and packages must be observed.
- Installation, operation, maintenance and servicing must only be carried out by suitably trained personnel and in accordance with the information given.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and / or temperature.
- Chemicals must be stored away from heat, protected from temperature extremes and powders kept dry. Normal safe handling procedures must be used.
- When disposing of chemicals ensure that no two chemicals are mixed.
- Product liability – advice and assistance provided without charge is given in good faith but without liability.

Safety advice concerning the use of the equipment described in this manual or any relevant hazard data sheets (where applicable) may be obtained from the Company address on the back cover, together with servicing and spares information.

### Warning.

- System configuration must be carried out only by users or personnel with approved access rights (user privileges).
- Read all relevant sections of this guide before configuring the system or modifying system parameters.
- Install and use associated equipment in accordance with the relevant national and local standards.

## 1.5 Information on ROHS Directive 2011/65/EU (RoHS II)

	ABB, Industrial Automation, Measurement & Analytics, UK, fully supports the objectives of the ROHS II directive. All in-scope products placed on the market by IAMA UK on and following the 22nd of July 2017 and without any specific exemption, will be compliant to the ROHS II directive, 2011/65/EU.

## 2 Mechanical Installation

### 2.1 Unpacking

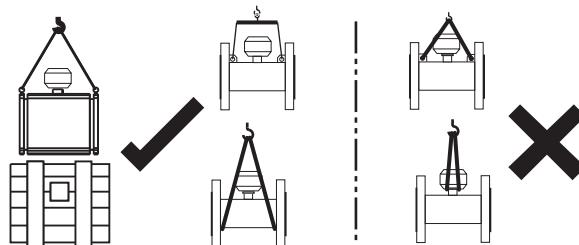

Fig. 2.1 Unpacking

#### Caution.

- Inspect the flowmeter for damage before installation. Do NOT install a damaged or faulty flowmeter.
- When lifting the flowmeter, use the lifting hooks provided or sling under the body of the meter. NEVER lift the flowmeter by the sensor cable terminal connection box – this will damage the terminal connection box and invalidate the warranty.

### 2.2 Installation Conditions

**Caution.** Do NOT exceed the maximum working pressure marked on the flowmeter.

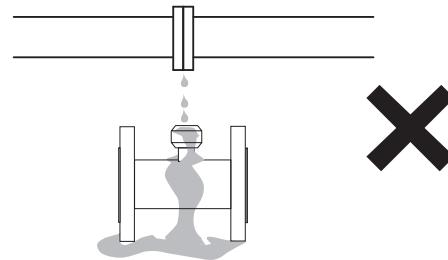

Fig. 2.2 Spillage

**Caution.** Do NOT install the flowmeter in an area where a spillage of any substance could damage the flowmeter.

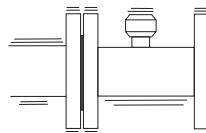

Fig. 2.3 Vibration

**Caution.** Do NOT install the flowmeter in a pipeline that may exert excessive movement and twisting forces on the flowmeter, for example, vibration.

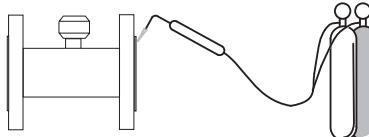

Fig. 2.4 Localized Heat

**Caution.** Do NOT subject the flowmeter to localized heat during installation. Remember – the flowmeter is a measuring instrument.

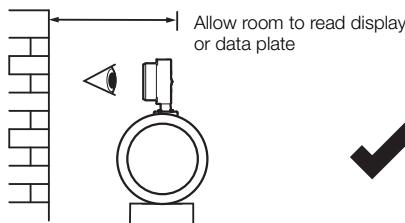

Fig. 2.5 Siting

**Note.** When installing an integral flowmeter, allow enough room to read the transmitter's display and data label.

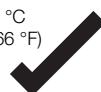

Fig. 2.6 Within Temperature Limits

**Caution.** Ensure the flowmeter is operated within its specified temperature limits. Use flange seals made from a material that is compatible with the fluid and fluid temperatures as required.

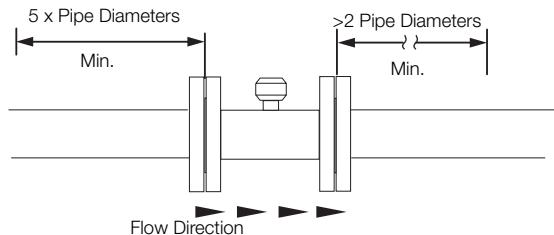

Fig. 2.7 Straight Pipe Requirements

**Note.** Ensure the flow direction in the pipeline corresponds to the identification plate. The flowmeter measures the flowrate in both directions. Forward flow is the factory setting. Experience has shown that, in most installations, a straight upstream section 3 x pipe diameters in length and a straight downstream section 2 x pipe diameters in length are sufficient. However, wherever possible, straight upstream and downstream sections 5 x 2 pipe diameters in length are recommended.

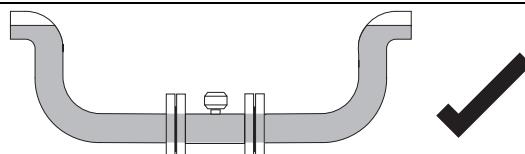

Fig. 2.8 Fluid Level

**Note.** For accurate and reliable operation, install the flowmeter sensor in a position where it will be completely full when in operation. The flowmeter will operate when not full, but indicated readings will not be accurate.

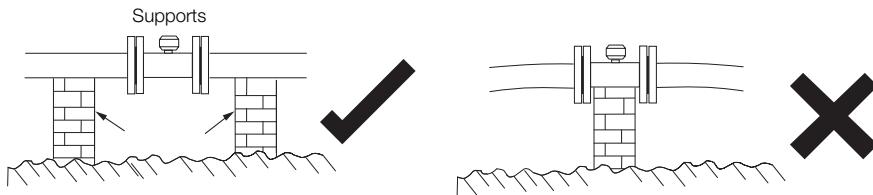

Fig. 2.9 Above Ground

**Caution.** Do NOT install the flowmeter in a manner that will subject it to mechanical tension (torsion, bending). If required, support the pipeline. Remember – the flowmeter is a measuring instrument.

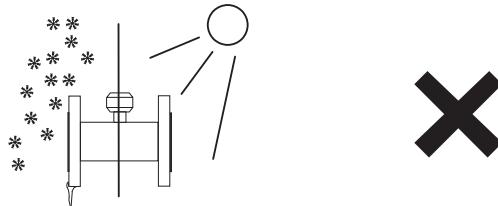

Fig. 2.10 Temperature Difference

**Caution.** Do NOT install the flowmeter in a position that will expose it to direct sunlight. Provide appropriate sun protection if required.

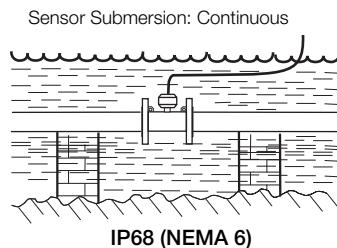

Fig. 2.11 Within Environmental Rating

**Caution.** Ensure the level of IP rating is correct for the required meter installation application. IP68 (NEMA 6) rated meters can be continuously submerged.

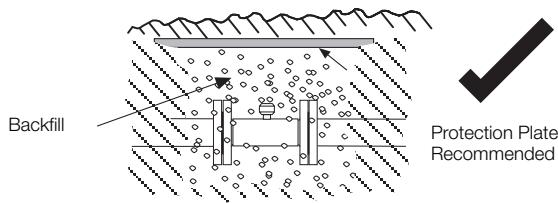

Fig. 2.12 Underground

**Caution.** When burying a flowmeter, ensure it can be found easily if required (for example, mark the installation position with a post). Installing a protection plate above the meter is also recommended.

**Note.** For further advice when burying flowmeters, contact the ABB Service Organization.

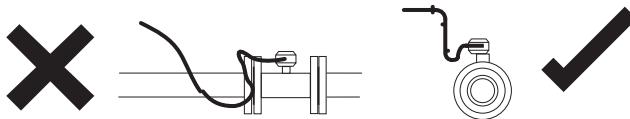

Fig. 2.13 Cable Routing

**Caution.** Install all flowmeter cabling neatly. Installation within a conduit is recommended. Install the cabling or conduit with a U-bend below the terminal connection box height to prevent water ingress into the flowmeter sensor by capillary action.

Fig. 2.14 Gasket Fitting

**Caution.** Use correctly sized gaskets. Do NOT fit gaskets that will extend into the flow area – the turbulence caused will adversely affect flowmeter accuracy.

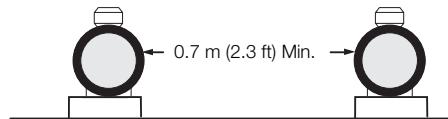

Fig. 2.15 Separation of Sensors

**Caution.** If flowmeters are installed in adjacent pipelines, ensure they are **at least** 0.7 m (2.3 ft.) apart to prevent the electromagnetic field from one meter affecting the other.

## 3 Electrical Installation

### 3.1 Grounding

**Caution.** For safety reasons and optimum performance, the flowmeter, pipelines and medium must be correctly bonded and grounded according to regulations. Do not ground cathodically-protected pipelines to an external earth.

**Note.**

- Connect the transmitter ground connection to the flowmeter body ground – see Figs. 3.5 (page 11) and 3.6 (page 11).
- The flow sensor must not be connected to a ground spike.
- For bonding connections use  $\geq 4 \text{ mm}^2$  (<10AWG) cable.

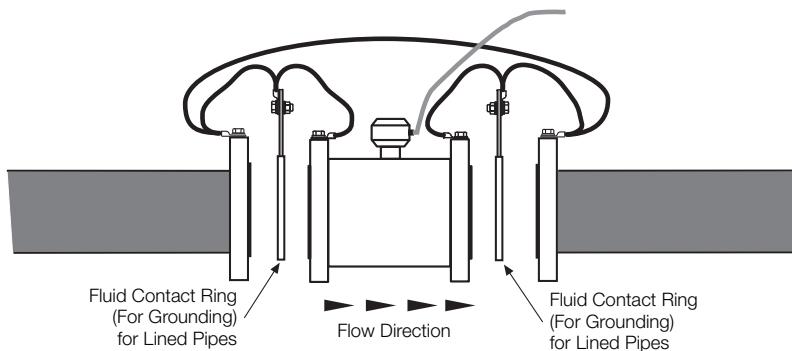

Fig. 3.1 Cross Bonding – All Flanged Pipes

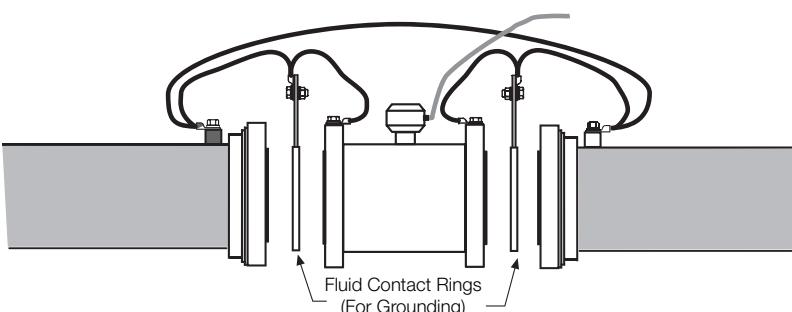

Fig. 3.2 Cross Bonding – Flange Adapter

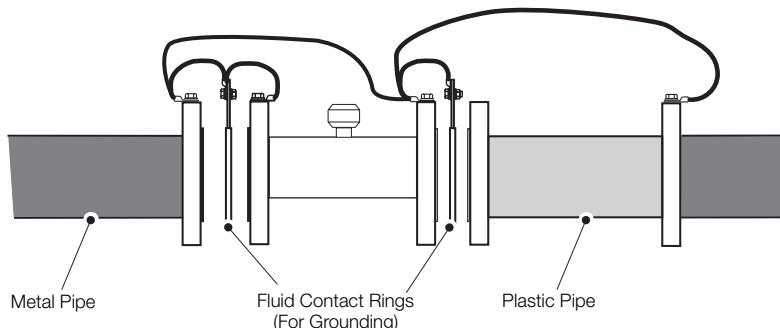

Fig. 3.3 Cross Bonding – Plastic Pipe Insert

**Note.** The grounding arrangement shown in Fig. 3.4 is applicable only to:

- cathodic protected installations
- installations where  $E_2$  and  $E_3$  are different to  $E_1$

**Caution.** Incorrect installation will result in fault currents flowing through the meter resulting in unstable readings.

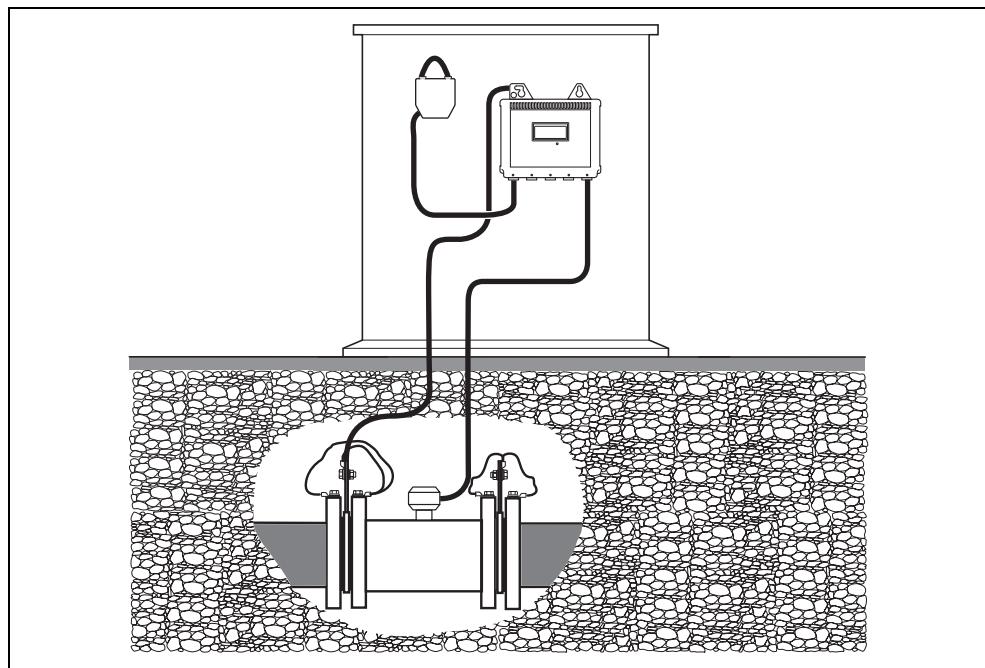

Fig. 3.6 AquaMaster 3 Transmitter Mounted in a Cabinet (Battery Version Shown)

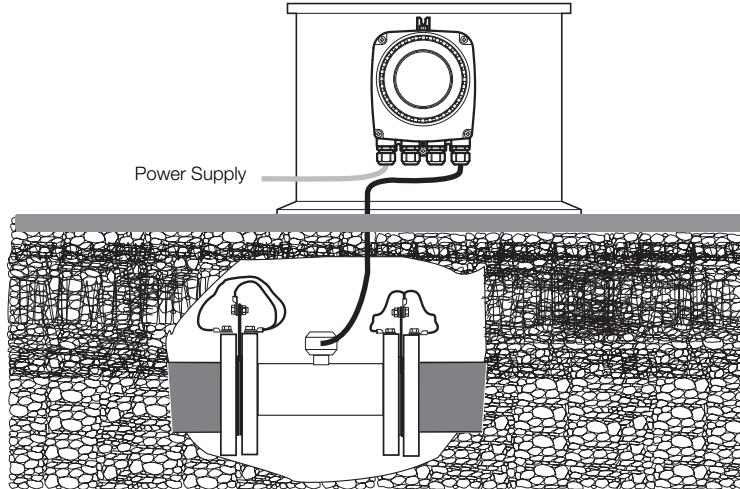

Fig. 3.7 WaterMaster Remote Transmitter Mounted in a Roadside Cabinet

### 3.2 Cable Preparation (Remote Transmitter Only)

**Caution.** Maintain Environmental Protection at all times – See Section 3.3, page 14.

To prepare the cable for connection at the transmitter and sensor terminal blocks:

1. Remove the outer cable insulation and Mylar® wrap.
2. Ensure the drain wire is sleeved.
3. Cut the cable connection wires to the lengths shown.

#### 3.2.1 Sensor Cable Connections (Remote WaterMaster Transmitter Only)

**Caution.**

- Make connections only as shown.
- Twist the screen wire of D1 / TFE + D2 with the outer screen drain wire and sleeve them green / yellow.
- Ensure the seal and mating surfaces are clean to maintain environmental rating.
- Conduit connections must provide cable entry sealing.
- Ensure cable glands are tightened after wiring. Do not overtighten the plastic cable glands to avoid destroying their sealing properties. Initially, tighten finger-tight, then a further  $\frac{1}{2}$  to  $\frac{3}{4}$  turn using a suitable spanner or wrench.

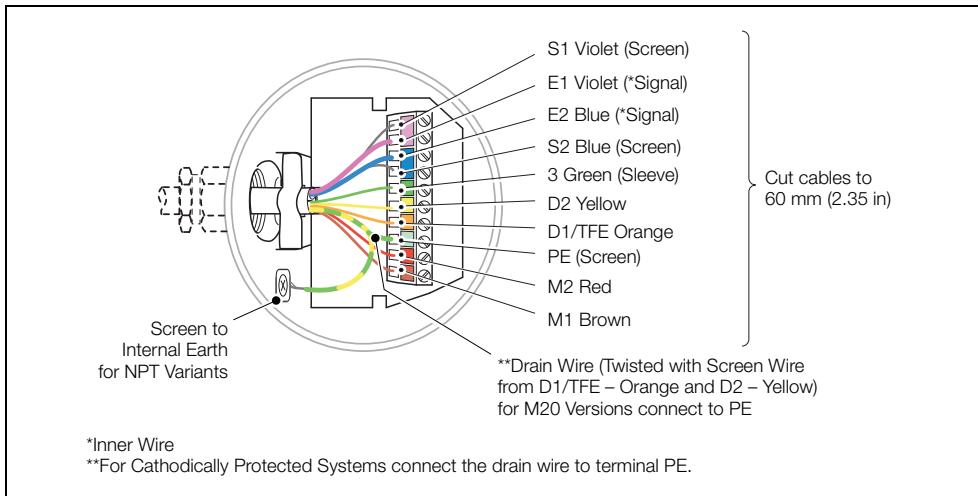

Fig. 3.8 Sensor Cable Connections – WaterMaster Transmitter

### 3.2.2 Sensor Cable Connections (Remote AquaMaster 3 Transmitter Only)

**Caution.**

- Twist the three screen wires together and sleeve them.
- Keep cable pairs twisted.
- Make connections only as shown.
- Maintain Environmental Protection at all times.
- Conduit connections must provide cable entry sealing.

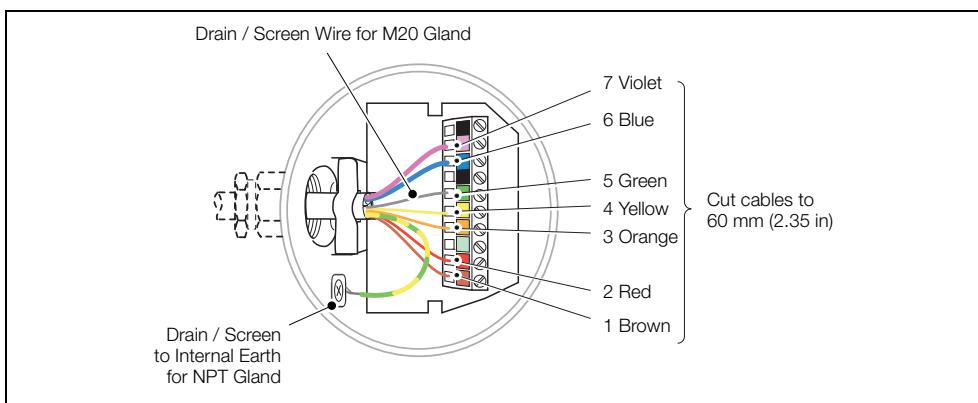

Fig. 3.9 Sensor Cable Connections – AquaMaster 3 Transmitter

### 3.3 Environmental Protection

Fig. 3.10 Potting the Sensor Terminal Box

#### Warning.

- Potting materials are toxic. Read the manufacturers' instructions carefully before preparing the potting material and use suitable safety precautions.
- Power up and check all connections before potting.
- The remote sensor terminal box connections must be potted immediately on completion to prevent the ingress of moisture.
- Do not overfill or allow the potting material to come into contact with 'O' rings or grooves.
- Do not let potting material enter conduit (if used).

## Functional Specification

### Temperature limitations

Ambient temperature	
Remote transmitter	-20 to 70 °C (-4 to 158 °F)
Integral transmitter	-20 to 60 °C (-4 to 140 °F)
Process temperature	See table below: 0.1 to 50 °C (32.2 to 122 °F) – OIML R49 T50 Approved

			Medium temperature °C (°F)	
Code	Lining	Flange material	Minimum	Maximum
FEF, FEW3	Hard rubber	Carbon steel	-10 (14)	80 (176)
		Stainless steel	-10 (14)	80 (176)
FEW1	PTFE	Carbon steel	-10 (14)	80 (176)
		Stainless steel	-25 (-13)	80 (176)
FEW3	PTFE	Carbon steel	-10 (14)	80 (176)

FEF	Elastomer	Carbon steel	-6 (21)	70 (158)
FEV	Polypropylene		-6 (21)	70 (158)

### Pressure limitations

As flange rating

PN25 Max Process Temp 50 °C (122 °F)

PN40 Max Process Temp 40 °C (104 °F)

OIML / MID Approved Meters 16 bar (232 psi)

UL Fire Service approved meters 285 psi

### Pressure equipment directive 97/23/EC

This product is applicable in networks for the supply, distribution and discharge of water and associated equipment and is therefore exempt.

### IP rating

IP68 (NEMA 6) to 7 m (20 ft.) depth

**Note.** Not sizes DN10 to DN32 (9/8 – 1 1/4 in. NB)

IP67 (NEMA 4X) – DN10 to DN32 (9/8 – 1 1/4 in. NB)

### Buriable (sensor only)

FEV, FEF and FEW – DN450 to 2400 (18 to 96 in. NB) to 5 m (16 ft.) depth

### Conductivity

>20 µS cm<sup>-1</sup>

### Transmitter mounting

Integral (not FEF) or remote

### Electrical connections

20 mm glands

1/2 in. NPT

20 mm armored glands

### Sensor cable

ABB WaterMaster cable available in two forms – standard and armored

Maximum length 200 m (660 ft.)

## Physical Specification

### Wetted parts

#### Electrode material

Stainless steel 316 L / 316 Ti

Super-austenitic steel

Hastelloy® C-22 and Hastelloy C4

(other electrode materials available on request)

#### Potential equalizing rings

Minimum of 1 recommended

#### Lining material / potable water approvals
