

AWT210

PROFIBUS PA 2-wire transmitter

Measurement made easy

—
AWT210
2-Wire transmitter

Introduction

This Communications Supplement provides procedures specifically related to the AWT210 PROFIBUS PA® 2-wire transmitter. Refer to the AWT210 Operating Instruction ([OI/AWT210-EN](#)) for general information on installation, operation and maintenance.

For more information

Further publications for the AWT210 transmitter are available for free download from:

1 Health & Safety

Document symbols

Symbols that appear in this document are explained below:

DANGER – SERIOUS DAMAGE TO HEALTH

This symbol in conjunction with the signal word 'DANGER' indicates an imminent electrical hazard. Failure to observe this safety information will result in death or severe injury.

WARNING – BODILY INJURY

This symbol in conjunction with the signal word 'WARNING' indicates a potential electrical hazard. Failure to observe this safety information will result in death or severe injury.

CAUTION – MINOR INJURIES

This symbol in conjunction with the signal word 'CAUTION' indicates a potentially dangerous situation. Failure to observe this safety information may result in minor or moderate injury. The symbol may also be used for property damage warnings.

IMPORTANT (NOTE)

This symbol indicates operator tips, particularly useful information or important information about the product or its further uses. The signal word 'IMPORTANT (NOTE)' does not indicate a dangerous or harmful situation.

Safety precautions

Be sure to read, understand and follow the instructions contained within this manual before and during use of the equipment. Failure to do so could result in bodily harm or damage to the equipment.

WARNING – BODILY INJURY

Installation, operation, maintenance and servicing must be performed:

- by suitably trained personnel only
- in accordance with the information provided in this manual
- in accordance with relevant national and local regulations

Potential safety hazards

AWT210 transmitter – electrical

WARNING – BODILY INJURY

To ensure safe use when operating this equipment, the following points must be observed:

- Up to 240 V AC may be present. Be sure to isolate the supply before removing the terminal cover.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and/or temperature.

Safety advice concerning the use of the equipment described in this manual or any relevant Material Safety Data Sheets (where applicable) can be obtained from the Company, together with servicing and spares information.

Safety standards

This product has been designed to satisfy the requirements of IEC61010-1:2010 3rd edition 'Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use' and complies with US NEC 500, NIST and OSHA.

This equipment complies with the requirements of CEI/IEC 61010-1:2010 'Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use' and complies with US NEC 500 and Occupational Safety & Health Administration. If the equipment is used in a manner NOT specified by the Company, the protection provided by the equipment may be impaired.

...1 Health & Safety

Waste Electrical and Electronic Equipment (WEEE)

WEEE EU Directive 2012/19/EU covers disposal and recycling of electronic equipment at the end of life for reasons of environmental protection.

For industrial installations, portable equipment is included. This means that when the transmitter is used with a portable sensor, it is included in directive's scope and has the WEEE symbol (left) on its data label. Therefore, at the end of life, contact the supplier for specialist waste recycling. It must not be disposed of as municipal waste.

Permanent Industrial installations are not designated within this directive for recycling. At the point of supply the intended use is not always known, so the WEEE symbol is included on all remote forms of the transmitter.

Product recycling and disposal (Europe only)

Electrical equipment marked with this symbol may not be disposed of in European public disposal systems after 12 August 2005. To conform to European local and national regulations (EU Directive 2012/19/EU), European electrical equipment users can now return old or end-of-life equipment to the manufacturer for disposal at no charge to the user. ABB is committed to ensuring that the risk of any environmental damage or pollution caused by any of its products is minimized as far as possible.

IMPORTANT (NOTE)

For return for recycling, please contact the equipment manufacturer or supplier for instructions on how to return end-of-life equipment for proper disposal.

Information on ROHS Directive 2011/65/EU (RoHS II)

ABB, Industrial Automation, Measurement & Analytics, UK, fully supports the objectives of the ROHS II directive. All in-scope products placed on the market by IAMA UK on and following the 22nd of July 2017 and without any specific exemption, will be compliant to the ROHS II directive, 2011/65/EU.

Product symbols

Symbols that may appear on this product are shown below:

Risk of electric shock.

This symbol, when noted on a product, indicates a potential hazard which could cause serious personal injury and/or death. The user should reference this instruction manual for operation and/or safety information.

Protective earth (ground) terminal.

Functional earth (ground) terminal.

Direct current supply only.

This symbol, when noted on a product enclosure or barrier, indicates that a risk of electrical shock and/or electrocution exists and indicates that only individuals qualified to work with hazardous voltages should open the enclosure or remove the barrier.

Recycle separately from general waste under the WEEE directive.

2 Cyber security

The AWT210 PROFIBUS PA® transmitter is designed to be connected to and to communicate information and data via a digital communication interface. It is your sole responsibility to provide and continuously ensure a secure connection between the product and your network or any other network (as the case may be). You shall establish and maintain any appropriate measures (such as but not limited to the application of authentication measures etc.) to protect the product, the network, its system and the interface against any kind of security breaches, unauthorized access, interference, intrusion, leakage and/or theft of data or information.

ABB Ltd and its affiliates are not liable for damages and/or losses related to such security breaches, any unauthorized access, interference, intrusion, leakage and/or theft of data or information.

3 Profibus PA

PROFIBUS is an all-digital, serial, two-way communication system that serves as a Local Area Network (LAN) for factory/plant instrumentation and control devices.

PROFIBUS is a manufacturer-independent, open Fieldbus standard for a wide range of applications in manufacturing, process and building automation. Manufacturer independence and openness are ensured by the international standard EN 50170.

The AWT210 transmitter meets the requirements of PROFIBUS PA Application profile 3.02.

Using the PROFIBUS protocol, devices from different manufacturers exchange information on the same communications bus without the need for special interface equipment.

Information on PROFIBUS PA can be found in the PNO Guideline and standards IEC 61158, IEC 61784, EN 50170/DIN 19245 and EN 50020 (FISCO model).

For further information on Profibus, refer to:
the PI organization website:

www.profibus.com

or the ABB website:

www.abb.com/fieldbus

4 Device overview

Four variants of AWT210 are available for use with pH, ORP, pION, and conductivity sensors.

Supported sensors:

- pH
- 2-electrode conductivity
- 4-electrode conductivity
- toroidal conductivity

The AWT210 PROFIBUS PA is compliant with the PNO Profile for Process Control Devices version 3.02 – Class B [Ref. 2].

The AWT210 PROFIBUS PA is a compact slave device implementing:

- one Physical Block (PB)
 - the PBs describes the necessary parameters and functions of the device or the operation of the device hardware itself.
- four Transducer Blocks (TB)
 - the TBs contain the parameters of a device representing the necessary parameters and functions of the connection to the process.
 - Examples are measured process values, the type of sensor and the calibration data.
 - There is one transducer block for each sensor type.
- two Function Blocks (FB)
 - both function blocks are AI blocks.
 - each FB can be connected to one TB at one time.

Reference documents

Document ID	Title

OI/AWT210-EN	AWT210 transmitter Operating Instruction
CI/AWT210-EN	AWT210 transmitter Commissioning Instruction

5 Transmitter functionality and operator interface controls

Process interface

Sensor Input Channels

The sensor module provides 8 terminals marked 1 to 8, 1 to 4 for Process Variable (detailed in commissioning instructions) and 5 to 8 for temperature sensor (up to 3 wire RTD + shield).

Operating ranges correspond to the capabilities of each sensor type.

Host interface

The AWT210 PA is a Bus Powered device with Profibus PA communication. The communication module provides 5 terminals for bus power & functional earth connection.

- Terminals 1(A) & 2(B) are for polarity independent bus lines.
- Terminal 3 (\perp) provides a functional earth connection.
- Terminals 4(A) & 5(B) are a repeat of Terminals 1(A) & 2(B).

Local interfaces, jumpers and switches

Local controls and displays

- The Device has a 75 x 65 mm (3.00 x 2.55 in.) monochromatic dot matrix LCD display and 4 push buttons

Internal jumpers and switches

The device has 2 internal switches, situated on the top righthand side of the communication module – see Figure 2, page 8:

- SW1: Reset to Defaults
 - if the device is powered up with SW1 in the **ON** position it returns device setup to default factory settings.
 - if powered up with SW1 in the **OFF** position the device retains previously saved user settings*.
- SW2: Write Protection
 - If SW2 is in the **ON** position HW write protect shows as enabled and the user is unable to make changes to setup or send Write commands via PROFIBUS®.

With SW2 in OFF position the user is able to make changes/send commands providing they are in a sufficient access level and Software Write Protect has not been enabled.

*Note: Reset to defaults is not performed if SW2 Write Protection is ON.

6 Installation

All devices are connected in a bus structure ('line') as shown in Figure 1.

The number of transmitters or devices that can be connected to a bus is primarily dependent on the power consumption of the transmitters or devices, the type of cable, the number of spurs, the total cable length of the bus and intrinsic safety requirements.

Each end of a segment must be terminated by an active bus terminating resistor. Both bus terminators must always be powered to ensure fault-free operation, therefore it is strongly recommended that they are connected to a back-up power supply.

The PROFIBUS PA furnishes transmitter power and can be configured as a point-to-point, tree, Daisy Chain, or Trunk/Spurs network. Modulating the base quiescent current generates the communication signals. The quiescent current value is used as a reference to establish the number of devices that can be installed on a single bus line.

Data is transmitted over the bus using digital, bit synchronous Manchester II coding at a baud rate of 31.25 kbit/sec.

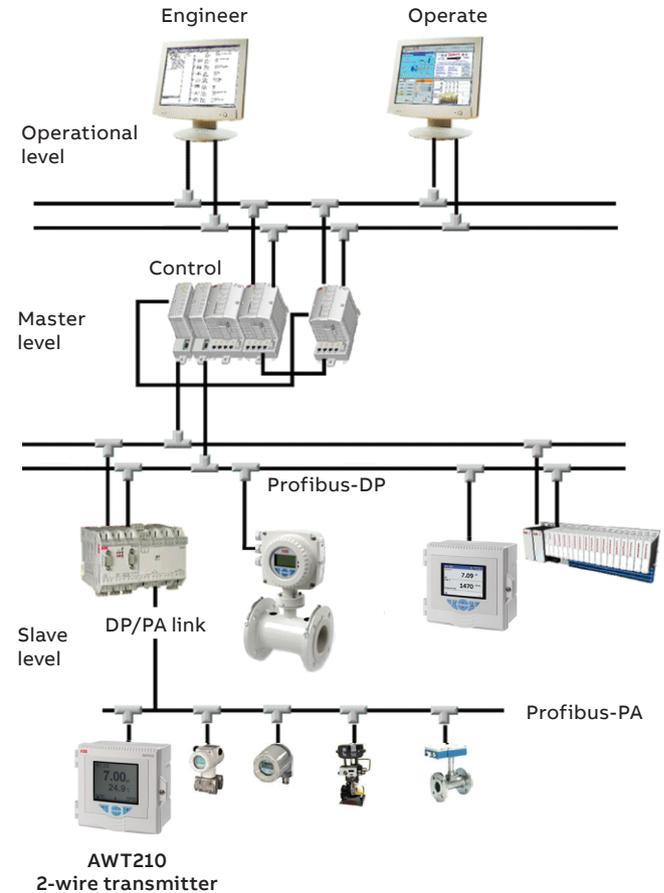

Figure 1 Typical PROFIBUS network

...6 Installation

Cable length

Maximum cable length	1900 m (6233 ft)
Maximum spur length (1 device)	120 m (394 ft)
Maximum spur length (2 devices)	90 m (295 ft)
Maximum spur length (3 devices)	60 m (197 ft)
Maximum spur length (4 devices)	30 m (98 ft)

Cable specification

The cable lengths in Table 1 apply to cable to the following specification:

Impedance	135 to 165 Ω
Capacitance per unit length	<30 pf/m
Loop resistance	110 Ω/km
Core diameter	0.64 mm
Core cross section	>0.34 mm ²

Network connection

PROFIBUS network connections are made to the terminal block on the AWT210 Communication module.

WARNING – BODILY INJURY

- Refer to the AWT210 Operating Instruction ([OI/AWT210-EN](#)) before making electrical connections.

NOTICE

Property damage

When connecting an AWT210 to a PROFIBUS-PA network:

- Use cable that meets PROFIBUS specifications for reliable communications
- Ensure a PROFIBUS active terminator is fitted to each end of each bus segment.
- Route data lines clear of the source of any strong electrical and magnetic fields.

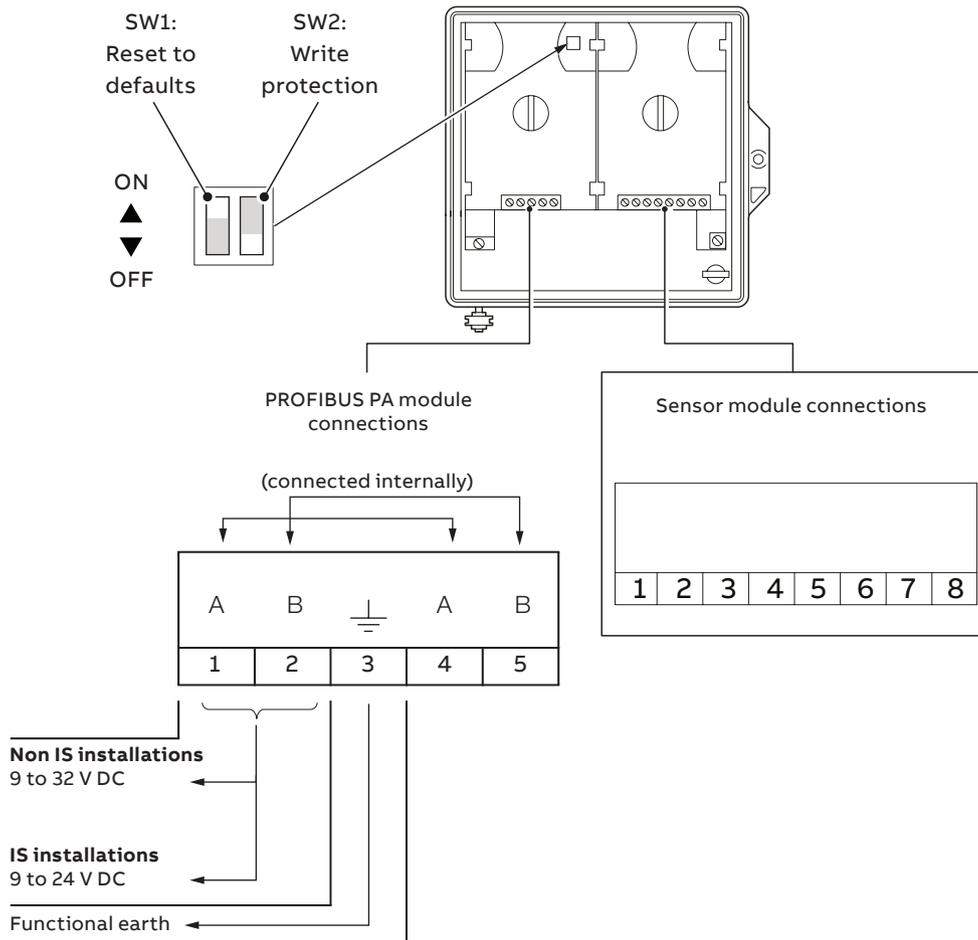

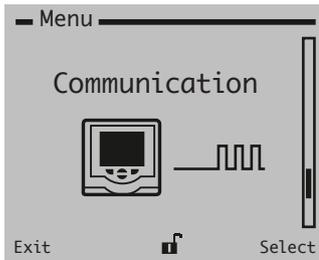

Figure 2 PROFIBUS PA communication module connection overview

7 Configuration

Local configuration

The configuration of PROFIBUS communications for an AWT210 transmitter can be set locally using the keypad and menus however it is recommended that the configuration is set remotely by a Profibus master.

Used to configure the communications.

Menu	Comment	Default
Slave address	Device-specific slave address to identify the transmitter on the network.	126
Tag Descriptor	String to identify the device (displayed at the top of the operator page)	"AWT210"
Ident No. Selector	Selects the ident number: 9750 – Analyzer/3404 - Dev Specific/Adaptation Mode	9750 = Analyzer
Manuf ID	Read Only Manufacturer Identification number	1Ah (26) = ABB
Device Type	Read Only Indicates the Profibus PA Device Type	Analyzer
PA Profile	Read Only Indicates the Profibus PA profile version	3.02

Integration using GSD

PROFIBUS devices differ with respect to available functionality and parameters for each device type and manufacturer. In order to obtain 'Plug-and-Play' configuration for PROFIBUS, characteristic device communication features such as manufacturer name, device name, hardware/software versions, baud rate and the number and nature of inputs/outputs are defined in an electronic device data sheet known as a GSD (Generic Station Description) file.

A GSD file is readable ASCII text file that contains both general and device-specific specifications for communication. Each of the entries describes a feature supported by a device. By using keywords, a configuration tool reads the device identification, the adjustable parameters, the corresponding data type and the permitted limit values for the configuration of the device from the GSD. Some keywords are mandatory (for example, **Vendor_Name**), others are optional (for example, **Sync_Mode_supported**).

The GSD file for AWT210 transmitters specifies the device specific Ident No. 3404 and conforms to the PROFIBUS standard, providing a clear and comprehensive description of each instrument in a precisely defined format. The description enables the system configuration tool to use the information automatically when configuring a PROFIBUS bus system.

The AWT210 GSD file (ABB_3404.gsd) is available for download from the ABB website at:

www.abb.com/fieldbus (follow the link for PROFIBUS DP field devices).

...8 PROFIBUS slots

Analog input blocks – slots 5 and 6

AI_1 mapping is located on slot 5. AI_2 mapping is located on slot 6.
The initial index is 16 and this number must be added to the relative Index in column index to get the absolute index.
